

Mul-T-Lock Interactive® Platform

High Security with patented key control

Mul-T-Lock's patented High Security Interactive platform raises the user's level of security to new heights, thanks to several special features:

- ▶ A spring-loaded pin placed inside the cylinder plug, which produces a "virtual combination" when the key with the floating pin is inserted.
- ▶ Mul-T-Lock's unique telescopic pin tumbler mechanism, with internal and external pins – requiring the simultaneous alignment of both internal and external shear lines for the plug to rotate.
- ▶ A specially designed plug, which forms a spherical, 3-dimensional shear line with the top and bottom pins, within the cylinder body.
- ▶ Key limitation is ensured by the patented key and key blank, supplied together with a coded Mul-T-Lock key card in every Interactive package. Additional keys may be cut by authorized Mul-T-Lock dealers, upon presentation of the key card – in accordance with Mul-T-Lock's official key cutting procedures.
- ▶ Steel inserts with high drill resistance
- ▶ High pick and bumping resistance
- ▶ Optional side and back pins, specially suited for master key systems.

The Interactive platform meets the requirements of some of the most stringent European and American standards.

The Interactive platform is retro-compatible with the Mul-T-Lock Classic platform, allowing the upgrading of existing locks from Classic to Interactive High Security.
